CASE STUDY with B-Cure Laser Sport Pro

The Patient: A 60 year old athlete who rides a bike daily, an average of 40 km. a day.

Case description:

Suffers from lower back pain and difficulty using the Abductor tendons

The pain increases during cycling and hurts more upon his return.

Prognosis:

Dynamic pain; the cause is lumbar pressure from an L4-L5 prolapsed disc radiating to the sciatica and asymmetrical posture, cartilage erosion of the (femora) hip joint.

Series of 12 treatments:

The patient underwent a series of treatments including: osteopathic treatment, Acupuncture combined with B-Cure Laser Sport Pro treatment. During the first 6 appointments there was no change in the pain or the range of movement.

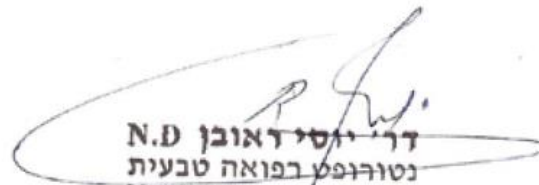

Intensive treatment was introduced from the 7 th appointment, using the device, twice a day for 8 minutes at two focal points (the hip joint and the lower back).

Results:

Pain decreased after using the device for an addition al two weeks, to the point of negligible pain and no limitation of the range of movement.

My professional recommendation:

I recommend using the B-Cure Laser Sport Pro for sports injuries and pathology such as prolapsed disc, inflamed sciatic nerve etc.
