CASE STUDY with B-Cure Laser Sport Pro

The Patient: a 54 year old woman.

Case description:

Suffers from pain in the hip joint and limited movement during prolonged standing

Prognosis:

Femoral cyst in the right hip joint, evident subchondral edema, narrowing of the femur and joint fluid, possible tear in the b labrum tendon in addition to possible right hamstring tendon inflammation.

12 Treatments once a week:

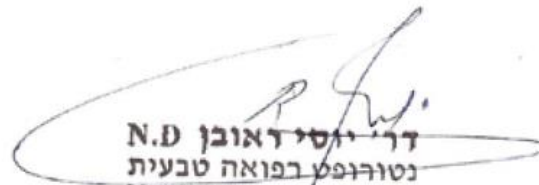

The first treatment dates November 12, 2014 during which the patient received osteopathic treatment combined with B-Cure Laser Sport Pro treatment. # weeks later the patient continued self administration at home with the device only – twice a day for 6-7 minutes. for an additional two weeks.

Results:

A month and ten days later, the patient has gone back to doing all routine activities including prolonged standing without pain.

My professional recommendation:

I recommend using the B-Cure Laser Sport Pro in pathology that includes inflammation, cysts, limited movement with guidance to avoid unnecessary surgery.
