CASE STUDY with B-Cure Laser Sport Pro

The Patient: Aged 82, generally active and healthy. Takes medication for high blood pressure and Diabetes.

Case description:

Acute big toe joint pain – Hallux Valgus red and sensitive.
Also localized pain in the Calcaneus (heel bone) apparently a spur.

Prognosis:

Has had 12 physiotherapy treatments at his HMO clinic with no apparent change.

Series of 12 treatments:

He was treated at my clinic in October 2014, with Acupuncture and physiotherapeutic ultrasound, along with cooling locally with ice. The second visit I also used the B-Cure Laser Sport Pro device for one and a half minutes (short treatment to examine the reaction).

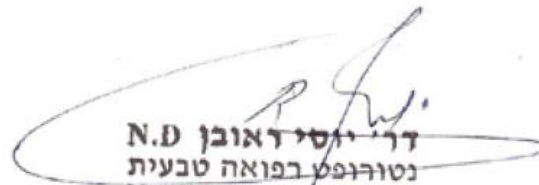

Following that the patient continued self administration on a daily basis with the device at home without any other types of treatment, 3 times a day for 7 minutes each time.

Results:

4 days into his self treatment at home, the pain in his ankle was significantly reduced. After 10 additional days it was completely gone, and the pain in the Hallux Valgus was reduced from level 8 to level 2.

My professional recommendation:

I recommend using the B-Cure Laser Sport Pro as an efficient and vital device at all stages of inflamed joints and Hallux Valgus as well as for treating spurs.
